CUSTOMER SATISFACTION

Customer satisfaction is our number one priority. We work to the utmost of our ability and ingenuity to develop plans that meet our client's needs and expectations, all within local regulations and national standards.

BACKGROUND

Most people are unaware of the important contribution of the architect and engineer, because we generally do not advertise our services. When a business or corporation builds a store, office building or an office complex, or when municipal planners initiate plans for a school, municipal building or institution, architects and engineers are involved.

REALIZING YOUR DREAMS

At Dammon Engineering, Inc. our primary goal is the complete satisfaction of every client.

With every new project, our goals remain constant:

- Stay within the budget
- Meet the schedule
- Provide a complete, functional design
- Deliver a first class final product to a happy client

We believe the key to a successful project is communication; this begins with listening to our client to gain a clear understanding of their needs and goals. The staff at Dammon Engineering understands the significance of maintaining a high level of communication throughout project life-cycle. This approach makes our client an integral part of the Dammon Engineering design team and ensures that the end result is something our client can be proud of.

Our staff strives to keep pace with the constantly evolving construction industry. Our roles as architects, engineers and designers demand that changing economic patterns, technological developments, and construction practices are harnessed in our overall design concepts. We believe that building systems (i.e. electrical, mechanical, plumbing, etc.) should be simple to use, easy to maintain, and cost effective.

SECURING YOUR CONFIDENCE

It is of utmost importance that we develop a strong and trusting relationship with each and every client. We are available to address any concerns or answer any questions. Dammon Engineering promotes an open-door policy.
