

Search Information

Address: 613 DEER CROSS COURT, MADISONVILLE, LA 70447
Coordinates: 30.4653962, -90.1935493
Elevation: 25 ft
Timestamp: 2022-07-20T21:03:21.154Z
Hazard Type: Wind

ASCE 7-16

MRI 10-Year ----- 77 mph
 MRI 25-Year ----- 88 mph
 MRI 50-Year ----- 98 mph
 MRI 100-Year ----- 107 mph
 Risk Category I ----- 121 mph
 Risk Category II ----- ⚠️ 129 mph

You are in a wind-borne debris region if you are also within 1 mile of the coastal mean high water line.

Risk Category III ----- ⚠️ 139 mph

If the structure under consideration is a healthcare facility and you are also within 1 mile of the coastal mean high water line, you are in a wind-borne debris region. If other occupancy, use the Risk Category II basic wind speed contours to determine if you are in a wind-borne debris region.

Risk Category IV ----- ⚠️ 143 mph

You are in a wind-borne debris region.

ASCE 7-10

MRI 10-Year ----- 76 mph
 MRI 25-Year ----- 89 mph
 MRI 50-Year ----- 98 mph
 MRI 100-Year ----- 107 mph
 Risk Category I ----- 121 mph
 Risk Category II ----- ⚠️ 130 mph

You are in a wind-borne debris region if you are also within 1 mile of the coastal mean high water line.

Risk Category III-IV --- ⚠️ 139 mph

If the structure under consideration is a healthcare facility and you are also within 1 mile of the coastal mean high water line, you are in a wind-borne debris region. If other occupancy, use the Risk Category II basic wind speed contours to determine if you are in a wind-borne debris region.

ASCE 7-05

ASCE 7-05 Wind Speed -- ⚠️ 113 mph

You are in a wind-borne debris region if you are also within 1 mile of the coastal mean high water line.

The results indicated here DO NOT reflect any state or local amendments to the values or any delineation lines made during the building code adoption process. Users should confirm any output obtained from this tool with the local Authority Having Jurisdiction before proceeding with design.

Disclaimer

Hazard loads are interpolated from data provided in ASCE 7 and rounded up to the nearest whole integer. Per ASCE 7, islands and coastal

areas outside the last contour should use the last wind speed contour of the coastal area – in some cases, this website will extrapolate past the last wind speed contour and therefore, provide a wind speed that is slightly higher. NOTE: For queries near wind-borne debris region boundaries, the resulting determination is sensitive to rounding which may affect whether or not it is considered to be within a wind-borne debris region.

Mountainous terrain, gorges, ocean promontories, and special wind regions shall be examined for unusual wind conditions.
