RE: SSC Tarmac Cement Project/Drawing Package

Mr. Latournerie,

Thank you for the opportunity to propose our services for the referenced project. Dammon Engineering is pleased to provide you with our proposal to furnish engineering services for the above-proposed project on Stone Road. We will provide a complete engineering design required for construction of an operating surface for the SSC.

The surface will be designed to support the total weights of both fully completed SSC craft as well as the light weight SSC craft transported from inside the building to the outside testing area and onto the existing landing pads.

Our plans will include demo, muck out of present surface, as well as filling, leveling, compaction and compaction tests as required. The drawings will specify the steel wire mesh, dowels and control joints to be used, as well as metal keyways, cement thickness and any other specifications required for construction.

We propose a fee of 1.67% of the construction cost. Based on an Estimated Total Construction Cost of \$1,200,000.00, our fee would be \$20,000.00 (Twenty Thousand Dollars). Our final fee will be adjusted in accordance with the total final construction cost. The above fee does not include the cost of permitting. The above fee also does not include the cost of soils analysis, drainage studies, traffic studies, wetlands determination, or other engineering studies that may be required by government agencies. These services may be provided at cost plus 10%. We have obtained a quote for the site borings from Stratum Engineering. The total fee for this service is \$10,450.00, see attached proposal.

Dammon Engineering, Inc. will be available during the construction phase to answer questions and clarify information contained in our plans. If you have any questions, or require additional information, please feel free to call.

Sincerely,

David Dammon
