RE: P0311858  
PEOPLES HEALTH NETWORK GENERATOR  
3838 N CAUSWAY BLVD  
METAIRIE, LA 70001-0000

Dear Mr. Jensen,

With regard to the above referenced project, Fire Marshal Inspector Tory Drenen inspected this project on 6/28/2008. The inspector has a question about a duct that passes thru the "Cut off" Room and would like your ruling on the matter, please see attached.

Another tenant constructed this duct, for their generator, during the construction phase of PO311858. This generator's radiator air exhaust vent was installed through the new 2-hour fire rated wall and extends to the outside wall. The radiator's air exhaust duct vent is constructed with all seams welded, no access panels, once it enters the "Cut-off" Room; it does have one set of flanges, for dismantling the duct, before it terminates at the outside wall. The penetration thru the 2-hour rated wall has been properly sealed. Please see attached drawing and photos.

The construction of this ductwork, once the flanges have been welded, should be considered as having a 2-hour rating since passes thru the "Cut-off" Room without an opening.

If you have any questions, please feel free to contact my associate David Dammon at the same number above.

Sincerely,

Emmett G. Dammon Jr.
