REF: Owens & Minor Tenant Buildout, Opening Reinforcement Design
2700 Brittmore Rd.
Houston, TX 77043

Dear Mr. Charbonnet,

Due to unknown factors of the existing concrete tilt-up wall (steel reinforcement size and general arrangement, panel width, shear wall constraints, etc.), the reinforcement for the two proposed openings has been designed as a standalone system capable of supporting all loads directly above the proposed openings. The opening reinforcement is designed for the worst case scenario, and may need to be adjusted after the wall has been cut into. Please contact my office once the wall has been opened and structural elements are exposed.

This design assumes that the proposed wall is NON LOAD-BEARING per your instruction.

Please see the attached calculations and details.

Sincerely,

Emmett G. Dammon, P.E.
