New Containment Wall

Dear Mr. Price

It was a pleasure to meet with you and discuss the existing site conditions for the purpose of designing a new containment wall for the 677,8377 gallon fuel tank, to meet all applicable codes for this industry. However I need additional information to make a decision on how to design this wall. First I would like to request a copy of the DEQ or the official letter stating the problem so we can make sure we address all their concerns.

I will need all foundation drawings or pictures and soil analysis of the installation of the footings for this area so I can see what is actually installed. If no information is available then an exploratory dig will have to be performed at least on two sides of the walls to verify the existing footing size and to see if the footings are pile supported along with a soil analysis.

We look forward to working with you on this project. If you have any questions please feel free to call.

Sincerely,

Chuck Dammon
