FLEXOSPAN STANDARD PUNCHING FOR CEE PURLINS AND GIRTS

STANDARD FINISHES : GALVANIZED, STAINLESS AND GRAY OXIDE

4" x 2 1/2" CEE

(AVAILABLE GAUGES - 16, 14, & 12)

(CALL FLEXOSPAN FOR ADDITIONAL PUNCH SIZES AND PUNCH OPTIONS)

FLANGE PUNCHING
9/16" x 1" SLOTS
(OPTIONAL)

WEB PUNCHING
5/8" x 3/4" SLOTS
(STANDARD)

SAG ROD PUNCHING
5/8" x 3/4" SLOTS
(OPTIONAL)

FLANGE PUNCHING
9/16" x 1" SLOTS
(OPTIONAL)

4" x 3 1/2" CEE

(AVAILABLE GAUGES - 16, 14, & 12)

(CALL FLEXOSPAN FOR ADDITIONAL PUNCH SIZES AND PUNCH OPTIONS)

6" x 2 1/2" CEE

(AVAILABLE GAUGES - 16, 14, 12 & 10)

(CALL FLEXOSPAN FOR ADDITIONAL PUNCH SIZES AND PUNCH OPTIONS)

FLANGE PUNCHING
9/16" x 1" SLOTS
(OPTIONAL)

WEB PUNCHING
5/8" x 3/4" SLOTS
(STANDARD)

SAG ROD PUNCHING
5/8" x 3/4" SLOTS
(OPTIONAL)

FLANGE PUNCHING
9/16" x 1" SLOTS
(OPTIONAL)

6" x 3 1/2" CEE

(AVAILABLE GAUGES - 16, 14, 12 & 10)

(CALL FLEXOSPAN FOR ADDITIONAL PUNCH SIZES AND PUNCH OPTIONS)

8" x 2 1/2" CEE

(AVAILABLE GAUGES - 16, 14, 12 & 10)

(CALL FLEXOSPAN FOR ADDITIONAL PUNCH SIZES AND PUNCH OPTIONS)

FLANGE PUNCHING
9/16" x 1" SLOTS
(OPTIONAL)

WEB PUNCHING
5/8" x 3/4" SLOTS
(STANDARD)

Notes: 1. The weight of the section has not been subtracted from these values. 2. Both flanges of member must be fully braced. 3. These loads are based on the transfer of the support loads directly to the web of the section by the use of clips or plates. For flanges bearing directly on structural, contact factory for section selection. 4. Loads shown are based on 55 KSI yield strength steel. 5. Loads shown are stress governing. When deflection limits are specified, contact factory. 6. These sample calculations are very basic. Many different variables can affect loading. For instance; drift loading, building height, geographic location, etc. Please consult Flexospan if special conditions exist. 7. The selection of sections for your application is subject to final approval by your design professional. 8. Capacity values have been calculated in accordance with the AISI 2016 design manual. 9. Values shown in the load tables for three or more spans are based on uniform bay spacings. If non-uniform bay spacings exist, contact factory.

Notes: 1. The weight of the section has not been subtracted from these values. 2. Both flanges of member must be fully braced. 3. These loads are based on the transfer of the support loads directly to the web of the section by the use of clips or plates. For flanges bearing directly on structural, contact factory for section selection. 4. Loads shown are based on 55 KSI yield strength steel. 5. Loads shown are stress governing. When deflection limits are specified, contact factory. 6. These sample calculations are very basic. Many different variables can affect loading. For instance; drift loading, building height, geographic location, etc. Please consult Flexospan if special conditions exist. 7. The selection of sections for your application is subject to final approval by your design professional. 8. Capacity values have been calculated in accordance with the AISI 2016 design manual. 9. Values shown in the load tables for three or more spans are based on uniform bay spacings. If non-uniform bay spacings exist, contact factory.

Notes: 1. The weight of the section has not been subtracted from these values. 2. Both flanges of member must be fully braced. 3. These loads are based on the transfer of the support loads directly to the web of the section by the use of clips or plates. For flanges bearing directly on structural, contact factory for section selection. 4. Loads shown are based on 55 KSI yield strength steel. 5. Loads shown are stress governing. When deflection limits are specified, contact factory. 6. These sample calculations are very basic. Many different variables can affect loading. For instance; drift loading, building height, geographic location, etc. Please consult Flexospan if special conditions exist. 7. The selection of sections for your application is subject to final approval by your design professional. 8. Capacity values have been calculated in accordance with the AISI 2016 design manual. 9. Values shown in the load tables for three or more spans are based on uniform bay spacings. If non-uniform bay spacings exist, contact factory.

Notes: 1. The weight of the section has not been subtracted from these values. 2. Both flanges of member must be fully braced. 3. These loads are based on the transfer of the support loads directly to the web of the section by the use of clips or plates. For flanges bearing directly on structural, contact factory for section selection. 4. Loads shown are based on 55 KSI yield strength steel. 5. Loads shown are stress governing. When deflection limits are specified, contact factory. 6. These sample calculations are very basic. Many different variables can affect loading. For instance; drift loading, building height, geographic location, etc. Please consult Flexospan if special conditions exist. 7. The selection of sections for your application is subject to final approval by your design professional. 8. Capacity values have been calculated in accordance with the AISI 2016 design manual. 9. Values shown in the load tables for three or more spans are based on uniform bay spacings. If non-uniform bay spacings exist, contact factory.

Number one priority at FLEXOSPAN is customer satisfaction! Our large inventory of galvanized, stainless steel, Zam® and primed painted steel in various gauges enables us to produce and ship orders quickly. Call us at 800-245-0396, and let us help your next project run smoothly by providing quality, cost effective components.

FLEXOSPAN'S easy access to major interstate highways makes for convenient delivery or customer pick up.
