Reviewing is for conformance with the design concept of the project and compliance with the information given in the Contract Documents. The Vendor/Subcontractor is responsible for dimensions to be confirmed and correlated at the site for information that pertains solely to the fabrication process or to the means, method, technician, sequences, and procedures of construction; and for coordination of the work with all trades.

Correction or comments made on the shop drawings during this review do not relieve the contractor from compliance with requirements of the drawings and specifications. This check is only for review of the general conformance with the design concept of the project and general compliance with the information given in the contract documents. This contractor is responsible for: confirming and correlating all quantities and dimensions, selecting fabrication processes and techniques of construction; coordinating his or her work with that of all other trades and performing all in a safe and satisfactory manner.

SLOPE:  
(BUILDING DIMENSIONS ARE NOMINAL, REFER TO PLANS)

This is to certify that this structure is designed utilizing the loads indicated and applied as required by the building code shown below. The certification is limited to the structural design of the framing and covering parts manufactured by the building manufacturer and is specified in the contract. Accessory items such as doors, window, louvers, translucent panels, and ventilators are not included. Also excluded are other parts of the project not provided by the building manufacturer such as foundations, masonry walls, mechanical equipment and erection of the building. The building manufacturer shall be held responsible for the design and construction of the building in accordance with the building manufacturer's design manual, the attached drawings and good erection practices.

Design Code IBC, 21

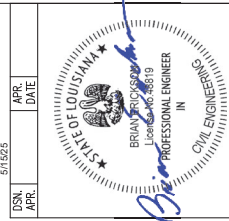

General Loads	2.50	psf
Roof Dead Load (D)	5.00	psf
Roof Live Load (L)	20.00	psf
Tributary Live Load Reduction	Yes	
Snow Load	3.50000	psf
Flat-Roof Snow Load (Pf)	5.00000	psf
Ground Snow Load (Pg)	10.00000	psf
Min. Snow (Low Slope) (Pmin)	1.00000	psf
Snow Exposure Factor (Ce)	1.00000	
Temperature Factor (ts)	1.000	
Thermal Factor (ct)	1.000	
Wind Load	N/A	
Wind Speed (V 3S)	140.00000	mph
Wind Speed (Vult & Vasd)	108.4434	mph
Occupancy / Risk Category	II - Normal	
Wind Exposure Category	B	
Wind Pressure Coefficient (Cp)	0.18	
Wind Infiltration Coefficient (Cip)	Enclosed	
Wind Importance Factor	N/A	
Seismic Load	1.00	
Spectral Response Factor (Is)	0.0897	
Site Class	B	
Seismic Response Coefficients (Ss and Sd)	0.0957	
Seismic Design Category	B	
Basic Seismic-Force-Resisting System(s) *	Longitudinal	
Total Design Base Shear (V)	0.67	Kips
Seismic Response Coefficient(s) (Cs)	0.0319	
Response Modification Factor(s) (R)	3.00000	
Analysis Procedure: Equivalent Lateral Force		

\* Steel Systems not Specifically Detailed for Seismic Resistance

DN 9 Loads, as noted, are as given within order documents and are applied in general accordance with the applicable provisions of the model code and/or specification indicated. Neither the manufacturer nor the certifying engineer declares or attests that the loads as designated are proper for local provisions that may apply, or for site specific parameters. The manufacturer's certification is limited to designs supplied by this manufacturer for the overall construction project.  
DN 10 This project is designed using manufacturer's standard serviceability standards. Generally this means that all stresses and deflections are within typical performance limits for normal occupancy and standard metal building products. If special requirements for deflections and vibrations must be adhered to, then they must be clearly stated in the contract documents.  
DN 11 X-Bracing is to be installed to a taut condition with all slack removed. Do not tighten beyond this state.  
DN 19 The framing as shown at the LEW & REW are not designed for future expansion. Corresponding frame reactions are calculated based upon actual wind velocity in the primary area.  
DN 27 Per ASCE 7-16 this structure qualifies and was designed as a fully enclosed structure.  
DN 28 Per ASCE 7-16 this structure qualifies and was designed ONLY for wind load forces exerted "normal (perpendicular) to the opening". No additional loads are included.

NOTE: PER DOOR GUIDE DATA SHEET THE PARALLEL FORCE =0.0LBF USE OF HSS "TUBE" JAMBS ARE NOT REQUIRED

IAS Certification Accredited

**GENERAL NOTES:**

- Who is NOT the contractor.
- This building manufacturer is not responsible for errors, omissions or damages incurred in the erection of the building.
- Temporary bracing must be installed by erector to provide adequate stability during erection. Bracing indicated on the erection drawings is critical to the stability of the completed structure and shall not be removed until the structure is fully braced.
- Wall and liner panels are an integral part of the structural system. Unauthorized removal of panels is prohibited.
- "On-coming", or pre-curved work is inherent to light gauge metal, may exist. This condition does not affect the finish or structural integrity of the panel, and is therefore not a cause for rejection.
- Trim part marks are as shown:  $\text{---}$  Trim Identification number

**APPROVAL NOTES:**

The following conditions apply in the event that these drawings are used as approval drawings:

- It is the responsibility of the contractor to ensure that all materials and components to these drawings are as shown.
- Have all instances of change clearly indicated.
- Be legible and unambiguous.
- Be clearly marked with the name of the manufacturer.
- Manufacturer reserves the right to re-submit drawings with extensive or complex changes required to meet code requirements. This may impact the delivery schedule.
- Approval of these drawings indicates conclusively that the manufacturer has correctly interpreted the requirements and further constitutes agreement that the building as drawn, or as shown, with indicated changes represents the total of the materials to be supplied by manufacturer, and that the contractor is bound by the manufacturer's drawings and specifications. Manufacturer's drawings and specifications shall be used in the event of any discrepancy, omission, or error. Manufacturer's drawings and specifications shall be used in the event of any discrepancy, omission, or error. Manufacturer's drawings and specifications shall be used in the event of any discrepancy, omission, or error.

**SAFETY COMMITMENT:**

The building manufacturer has a commitment to manufacture quality building components that can be safely erected, however, the safety commitment and job site practices of the erector are beyond the manufacturer's control. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities.

**BOLT TIGHTENING:**

The proper tightening and inspection of all fasteners is the responsibility of the erector. All high strength bolts shall be tightened to the specified torque values. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities.

**BUILDER/CONTRACTOR RESPONSIBILITIES:**

It is the responsibility of the builder/contractor to insure that all project plans and specifications comply with the applicable requirements of any governing building authorities. The supplier of sealed engineering data and drawings for the metal building system does not imply or constitute an agreement that the manufacturer is responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities. The manufacturer is not responsible for any accidents, injuries, or damages that occur on a construction project. The contractor must secure all required approval and permits from the appropriate authorities.

**PRODUCT CERTIFICATION:**

The building manufacturer is a member of the Metal Building Manufacturers Association. The building manufacturer's fabrication and products are covered by one or more of the following certifications:

- City of Houston approved fabricator (registration no. 721)
- International Building Code (IBC)
- ASTM-A529 or A-572. Flanges with thickness of 1" or less and width of 12" or less conform to A-529 with minimum yield point of 55,000 PSI. Flanges greater than 1" thick with a minimum yield point of 55,000 PSI conform to A-572 with a minimum yield point of 55,000 PSI.
- ASTM-A572. Flanges with thickness of 1" or less and width of 12" or less conform to A-572 with a minimum yield point of 55,000 PSI. Flanges greater than 1" thick with a minimum yield point of 55,000 PSI conform to A-572 with a minimum yield point of 55,000 PSI.
- ASTM-A572. Flanges with thickness of 1" or less and width of 12" or less conform to A-572 with a minimum yield point of 55,000 PSI. Flanges greater than 1" thick with a minimum yield point of 55,000 PSI conform to A-572 with a minimum yield point of 55,000 PSI.

(a) Wind bent in bay, base above finish floor  
(b) Rigid frame at endwall

Reactions for seismic represent shear force, En  
Reaction values shown are unfactored

**NOTES FOR REACTIONS**

Building reactions are based on the following data:

- Width (ft) = 30.0
- Length (ft) = 65.0
- Roof Slope (rise/run) = 4.0/12.0
- Dead Load (psf) = 2.5
- Roof Live Load (psf) = 20.0
- Frame Live Load = 12.0
- Mezzanine = 17.1
- Mezzanine (psf) = 140.0
- Wind Code = IBC - 21
- Impedance Wind = Exposed
- Seismic Zone = B
- Seismic Coeff (Sms) = 0.14

**DRAWING STATUS**

USE DRAWINGS: BEING FOR APPROVAL ARE BY DEFINITION NOT FINAL AND ARE FOR CONSULTATION ONLY. REVISIONS TO DOCUMENTS: ONLY REVISIONS ISSUED FOR CONSTRUCTION CAN BE MADE.

FOR PERMIT: BEING FOR PERMIT USE BY DESIGNER NOT FINAL. IN FINAL AS A MINIMUM REVISIONS ARE NOT IDENTIFIED. ONLY COMPLETE REVISIONS FOR CONSTRUCTION CAN BE CONSIDERED AS FINAL DRAWINGS.

- ERECTOR NOTES:**
- 1) Joist hangers to be closely spaced to support roof panels.
  - 2) Do not attach roof panel to purlin in areas where shown.
  - 3) Quads-Lok seam is required.

**GENERAL NOTES:**

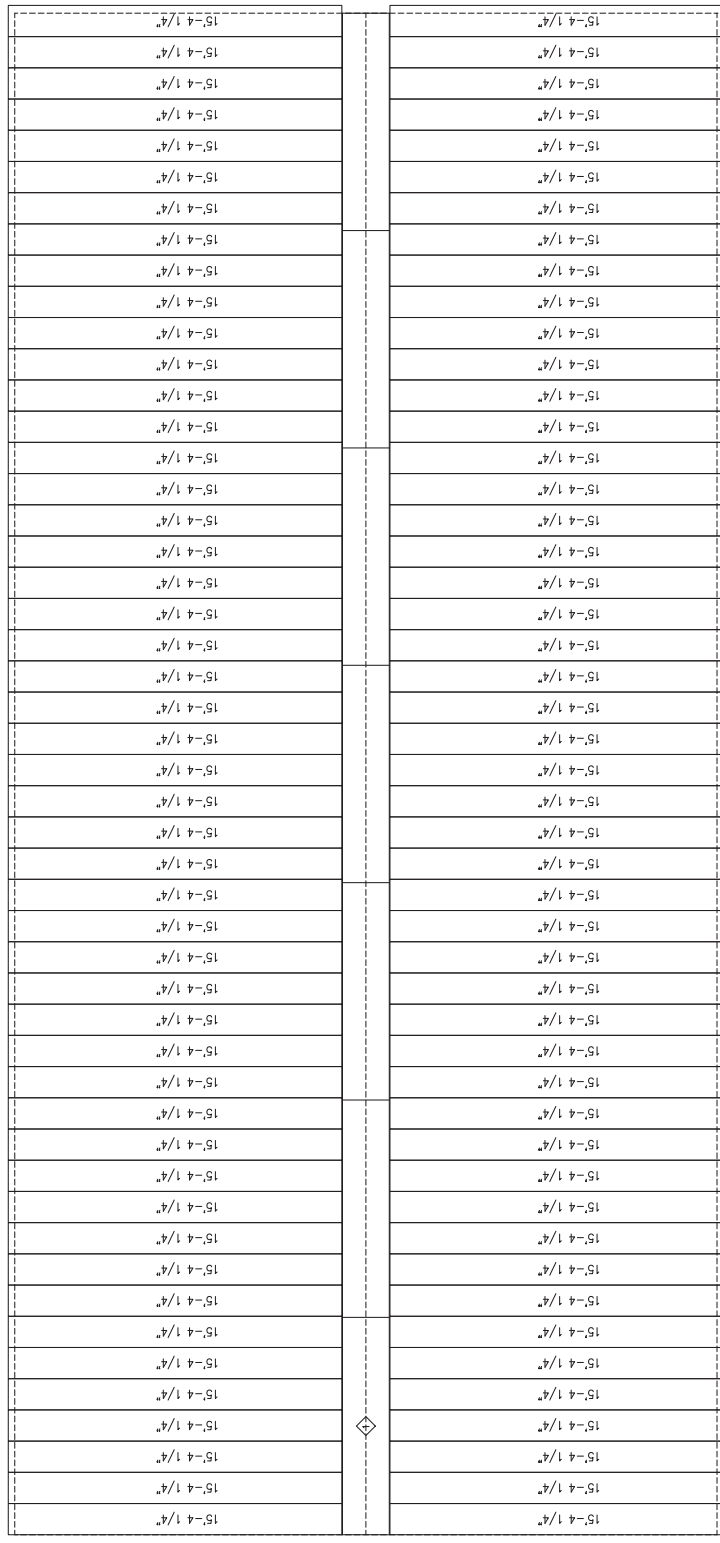

- 1) ALL MEMBERS FOR FABRIC INSTALLATION.
- 2) THE LARGER FLANGE IS 1/8" WIDER THAN THE SMALL FLANGE.
- 3) LAP THE SMALL FLANGE INSIDE THE LARGE FLANGE.

 DRAWING NO.: 20603-35  
 SHEET NO.: 01 OF 5

NOTE: Field cut/crimp top leg of panel prior to installing rake trim.

MEMBER TABLE	
Specify	Part
1.1/2"	RS-216
1.1/2"	RS-218
1.1/2"	RS-219

**Finish Rake Detail - Sheated Wall (Option 1)**  
 TD154  
ISSUED BY: 2022, DRAWN BY: J.M.V.

Note # 1: Outside panel closures are required on all sheated walls with a roof slope of 2:12 or less.  
 Note # 2: 2x2 Form Closure will replace the outside panel closure on all sheated walls with a roof slope greater than 2:12.

**Endwall Panel Closure**  
 TD205  
ISSUED BY: 2022, DRAWN BY: J.M.V.

MEMBER TABLE	
Specify	Part
1.1/2"	RS-216
1.1/2"	RS-218
1.1/2"	RS-219

**Low Eave Detail - Sheated Wall**  
 TD155  
ISSUED BY: 2022, DRAWN BY: J.M.V.

**Standard Trim Detail**  
 TD291  
ISSUED BY: 2022, DRAWN BY: J.M.V.

Locate the Gutter End Cap 1 1/2" from the end of the Gutter. Apply the Gutter End Cap to the Gutter. Attach the End Cap to the Gutter End Cap surface and the Gutter. Attach the End Cap to the Gutter End Cap (10) Pop Rivets. Check to make sure all edges are sealed with PermaBite Tube Seant. Insert the Gutter into the Rake Trim. Member edges and attach to the Rake Trim with (12) Pop Rivets.

**Ridge Detail**  
 TD157  
ISSUED BY: 2022, DRAWN BY: J.M.V.

**Roof Panel Sections - VS-216 Triplelok Seam**  
 TD158  
ISSUED BY: 2022, DRAWN BY: J.M.V.

**GENERAL NOTES:**  
 SEE ELEVATIONS FOR TRIM MARKS, LENGTHS, LOCATION, AND QUANTITY.  
 ALL TARE SEAMANT IS CONTINUOUS, UNLESS NOTED.  
 FOR CLARITY OF DETAIL, ROOF INSULATION IS NOT SHOWN.
