RE: Under-Voltage Trip Device for the Towers Building, Slidell

Mr. Fields,

Dammon Engineering is pleased to propose our design services for the design of the Under-Voltage Trip Device for the Towers Building in Slidell.

We propose to furnish a design package to install an Under-Voltage Trip Device that will monitor the line voltage and will trip when it falls below the target voltage.

We propose a total design fee of \$650.00 (Six hundred and Fifty dollars). If services are required for assistance with the bidding process our fee will include an additional \$300.00 (Three hundred dollars) charge for these services.

Please note that our fee does not include the State Fire Marshal review fee if required, nor does it include the IBC review fee if required. The above fee does include five sets of plans provided to St. Tammany Parish once the project is 100% complete.

We appreciate the opportunity to propose our services and we look forward to working with you on this project. If you have any questions, or require any further information, please feel free to call.

Sincerely,

David Dammon, VP
