Req Seq #: 142072

Attending Physician Fax: (985)646-0696

Date Exam Ordered: 09/07/2011 12:50 PM

Exam: MDI ABDOMEN AND PELVIS W/WO CONTRAST CT

ORIGINAL

CT abdomen with and without contrast

Clinical data: 564.1, 577.0

FINDINGS: Pre- and postinfusion images were obtained from the lung bases to the iliac crests.

The lung bases are unremarkable.

Images of the abdomen demonstrate innumerable small low-density lesions within the liver highly suspicious for metastatic disease. Most measure 1 cm or less, with a dominant cystic lesion in the right lobe near the dome measuring 2 cm. The gallbladder is absent. Common bile duct is mildly dilated with no intrahepatic biliary dilation.

There is a solid and cystic mass lesion within the body of the pancreas measuring 3.6 cm in size. Findings are highly suspicious for minor pancreatic malignancy, with a metastatic lesion reflecting a less likely differential possibility. The pancreatic duct within the distal body and tail of the pancreas is moderately dilated.

The spleen is normal in appearance. Small enhancing nodules adjacent to the spleen are consistent with splenules. The kidneys and adrenal glands are normal. The aorta is normal in caliber.

Mildly enlarged periaortic lymph nodes are suspicious for malignancy, the largest to the right of midline measuring 18 mm in size.

Bowel structures are unremarkable. There is no free air or free fluid.

Exam: MDI ABDOMEN AND PELVIS W/WO CONTRAST CT

IMPRESSION:

1. 3.6 cm solid and cystic mass lesion in the body of the pancreas highly suspicious for malignancy. The pancreatic duct proximal to this point in the body and tail of the pancreas is moderately dilated. There are innumerable small low-density lesions within the liver likely reflecting metastases. There is also mild periaortic lymphadenopathy.
2. Surgical absence of the gallbladder.

CT pelvis with contrast

FINDINGS: Postinfusion images demonstrate no mass or adenopathy. There is no free air or free fluid. Bowel structures and urinary bladder are unremarkable.

IMPRESSION:

1. No acute intrapelvic abnormalities.

Findings were called to Dr. Trainor's nurse at the time of interpretation.
