David,

Starting a project in Bay St. Louis. Building a family subdivision with a "gathering house" then individual cottages. Attached is the plans for the gathering house. Plan on doing a cable slab on grade. Soil borings just came back, waiting on stamped copy. This can be designed by cable company. Looking for you to do the engineering on the structure. Have some items that need to be discussed and modified.

Plan on putting 6" between double doors and windows - 2 full studs and 2 cripple.

Plan on using MI windows. Don't think we can do quads. Would need to add 6" as above. Not sure on the triples either.

Give me a call to discuss.

Tim Donnelly
