It comes from our "yellow book". I will attach pictures.

Lol! Maybe some text then?

Do you have the road widths?

No drawings. I don't know why you engineers love pictures so much!

Thank you, Angelia. That is very helpful.

Does this information come from a drawing? If so, can I ask a copy of it? I can have someone to pick it up with you.

Ricardo

Puleston Road - Starting At Hwy 16 1st .5 Mile Is 50' Row, Next 1.74 Is 40' Row Then Remaining .52 Is 30' Row
Rutland - I do not have a written right- of- way for this road.

Ricardo,

I will check and see if we have a recorded right of way width on those roads. I know we won't have any plans or maps showing elevations as these are very old roads. If we do not have a written right-of-way recorded, the Parish always uses 18 inches behind the back slope of the ditch as the right-of-way. As far as Entergy goes, I guess technically the answer is we should contact them, but I'm ok with asking for forgiveness rather than permission. Up to you on that one!

Hi Andy,

For the two Parish roads where we intend to install the force main to the Town of Amite (Rutland Rd./Puleston Rd.), do you have any plans showing the right-of-way? Also, do you happen to have any maps showing elevations of those roads?

Also, since we have the transmission line just beside Rutland Rd., do we need to contact Entergy to see if they have any restrictions? Of course, we are going to try to install the line on the opposite side of the road, but just trying to be ahead of the game.

Trying to put together some preliminary cost estimate for the project. Thank you and have a great weekend!
